Labor Planning and Scheduling

As equipment increasingly becomes more of a commodity, more and more companies choose to differentiate their offerings via the services they provide. Hence, management and control of Labor Planning (Revenue) and Labor Scheduling (cost) assumes critical importance.

R2's Labor Planning and Scheduling module offers your team benefits in these key areas:

- Simple and easy assignment of labor portions
- Intuitive graphical web based for easy labor planning
- Availability calendar, priority, ratings, certifications, history and detailed crew rolodex
- Detailed reporting and analysis on labor revenue and costing

Collecting information is a basic software functionality that most softwares cater for. It is how that data is presented and the insights it provides to enable fast, informed decisions that will hugely differentiate your operations.
